

SAMPLE MANAGEMENT SOFTWARE

GEL's Analytical Services

- Environmental Monitoring
- RCRA Investigation
- NPDES Analysis
- Hazardous and Mixed Waste Characterization
- Radiobioassay
- Decommissioning
- Remediation Closure Analysis
- Specialty Analyses

GEL Laboratories, LLC (GEL) offers hardware and software solutions for the management of sample collection, scheduling, data tracking, and storage of all sample data required for site compliance reporting.

Sampling Program Capabilities

- Wireless tablet and printer with GEL Sample Management Software
- Automatic generation of bar coded laboratory sample labels
- Automatic generation of electronic chain of custody
- Real time access to a calendar of required sampling events
- A composite sample tracking over weekly, monthly, and quarterly events
- Sampling locations preloaded with latitude and longitude specifications

The automatic transfer of data to our laboratory eliminates the opportunity for sampling transcription errors and omissions to occur.

All sampling and analysis data can be stored for long term tracking, trending, and reporting in our Laboratory Information Management System (LIMS) with access through our Virtual Project Management (VPM) system. The VPM allows clients 24 hour access to their data via a password protected secure portal.

GEL can customize and integrate our software with existing systems and infrastructure on site. We offer on site training for proper integration from sample collection through reporting.
